Unseen : Road Traffic Crashes : Read the passage and do the answer carefully :

Each year nearly 1.2 million people die and millions of other are injured or disabled as a result of road traffic crashes. The vast majority (over 90%) of all road traffic deaths and injuries occur in low-income and middle-income countries.

In high-income countries, most of those killed or injured in road traffic crashes are drivers and passengers of four-wheeled vehicles. In low-income and middle-income countries, however, “vulnerable road users” – pedestrians, cyclists and motorcyclists and users of public transportation – constitute a higher proportion of road users, and consequently make up a larger proportion of those injured or killed on the roads.

Children and young people under the age of 25 years account for over 30% of those killed and injured in road traffic crashes. Of the 383046 road traffic deaths that were recorded in this age group around the world, at least half were road users from the World Health Organization’s African and South-East Asia Regions. However, the highest rates of road traffic fatalities in the 0-25 year age range occur among road users in the African and the Eastern Mediterranean regions.
